Does Dedicated Internet Makes Sense?

This Checklist Can Help You Decide.

Speed isn't the only factor when deciding your business internet connection.

Factor	YES	NO	Why You Should Care
Do you have more than 25 employees using the same internet connection?			Every employee puts additional strain on your network.
Do your employees use more than one connected device?			More devices means more need for bandwidth.
Do you plan to grow or expand?			Your current service may not be strong enough for future needs.
Do you use data-intense software?			Certain applications require more powerful connections.
Do you handle large files sizes (50 MB or more) or use cloud-based software and apps?			Every file is a piece of data. And file sizes are growing exponentially.
Is your office close to your provider?			The farther from the source, the weaker the signal.
Do you ever notice slower speeds or network congestion?			Slower speeds—especially during certain times of the day—can mean you're sharing bandwidth with other businesses.
Total:			

How did you do?

You're probably fine with your current service if you answered "No" three or fewer times.

But if you answered "Yes" four or more times, you may want to learn how Dedicated Fiber Business Internet can help.
